Unit 2 Linear Functions
Day 1 Homework

Name
Date $\qquad$ Hour $\qquad$

## Part 1

Robert can solve 15 mathematics problems per hour. He starts solving at 7:00 pm. Marie can solve 20 math problems per hour and she starts at 8:00 pm. At what time will they have solved the same number of mathematics problems and how many will they have solved?

Solve this problem graphically and with a table.

| Time <br> (Hours) | Number <br> of Solved <br> Problems <br> (Robert) | Number <br> of Solved <br> Problems <br> (Marie) |
| :---: | :---: | :---: |
| $\mathbf{0}$ |  | xxxxxxxxx |$|$|  |
| :---: |
| $\mathbf{1}$ |
| $\mathbf{2}$ |
|  |

1. At what time will they have solved the same number of mathematics problems?
2. How many will they have solved?
3. At what time will they have solved 180 mathematics problems?

Robert:
Marie:

## Part 2

The rate of change is constant in each table and graph. Find the rate of change. Explain what the rate of change means for each situation.
1.

| Time <br> (hours) | Temperature <br> ( ${ }^{\circ}$ ) |
| :---: | :---: |
| 1 | -2 |
| 4 | 7 |
| 7 | 16 |
| 10 | 25 |
| 13 | 34 |

2. 

| People | Cost <br> (dollars) |
| :---: | :---: |
| 2 | 7.90 |
| 3 | 11.85 |
| 4 | 15.80 |
| 5 | 19.75 |
| 6 | 23.70 |

3. 

4.

Find the rate of change for each situation.
5. A baby is 18 in long at birth and 27 in long at ten months.
6. You drive 30 mi in one hour and 120 mi in four hours.
